Laser tattoo removal aftercare instructions

After laser tattoo removal

These are your clinic's care steps. If your technician told you something different, follow your technician.

- Keep the area clean and covered for as long as your technician says.
- Don't pop blisters or pick scabs. Let them heal on their own.
- Skip swimming, hot tubs and saunas until the skin has healed.
- Keep the area out of the sun and tanning beds. Once it has healed, cover it when you're outside.
- Your next session is 6 to 8 weeks from now, once the skin has fully healed.

If something looks or feels wrong, contact the clinic. For a medical concern, contact your doctor.
